

# BNVD

## Binocular Night Vision Device

### Advantages

- Outstanding depth perception
- Automatic brightness control (ABC)
- High light cutoff

The BNVD is a rugged dual image intensifier tube night vision goggles that offers users significantly better depth perception and situational awareness during night operations than a single tube system. The BNVD can be operated as a hand-held binocular, or head mounted or helmet mounted for hands-free tactical operations. The BNVD was designed specifically for situations where mission performance and depth perception are critical elements.

The BNVD can be easily converted into an enhanced long range binocular with the use of optional 3x or 5x magnifier lenses. The BNVD is submersible up to 66 feet and is available with variable gain.
