

# PWC H-HARNESS

## PERSONAL WEAPONS CONTAINER

PART DESCRIPTION	Personnel Weapons Container (PWC) H-Harness
MAX DEPLOYMENT SPEED	150 Keas
MAX CARRYING WEIGHT	50.0 Kg (110Lbs)
MAX ALTITUDE	25 000 ft A.S.L.

The Personnel Weapons Container (PWC) consists of an H-Harness, a single point release system and a lowering lanyard.

The PWC is designed to securely hold the Jumpers equipment during a Parachute Jump. This equipment can be released from the Jumper when the Jumper pulls the single release handle.

After releasing the single point release handle, the equipment lowers to below the jumper and is held in position by a lowering lanyard. This allows the equipment to remain close to the jumper during landing and also as the equipment is lowered first, the jumper lands unhindered by the equipment and excluding the equipment weight. This allows for a safer and better controlled landing.

The PWC can be fitted and operated on the M-Series:

- Tactical Parachute Systems: **M9, M10, M11, M12, M13**
- Troop Parachute Systems: **T10, MC1-1B, MC1-1C**

**Aerodyne**
